

Types of Angles

Types of Angles:

1. Acute Angle:

- An acute angle is an angle that measures less than 90 degrees.
- It is smaller than a right angle and larger than a straight angle.

2. Right Angle:

- A right angle is exactly 90 degrees.
- It forms a perfect square corner.

3. Obtuse Angle:

- An obtuse angle is an angle that measures more than 90 degrees but less than 180 degrees.
- It is larger than a right angle but smaller than a straight angle.

4. Straight Angle:

- A straight angle is exactly 180 degrees.
- It forms a straight line and is also known as a line angle.

5. Reflex Angle:

- A reflex angle is an angle that measures more than 180 degrees but less than 360 degrees.
- It is larger than a straight angle.

6. Complete Angle:

- A complete angle is exactly 360 degrees.
- It forms a full circle and is also known as a revolution or round angle.

Understanding the different types of angles allows us to classify and measure angles in various geometric situations.
