

Troubleshooting Common Computer Issues

Troubleshooting Common Computer Issues

1. Computer Won't Turn On

- Check power connections.
- Ensure power outlet is working.
- Test power supply unit.
- Check for any loose connections.

2. Slow Performance

- Close unnecessary programs.
- Run disk cleanup to free up space.
- Check for malware or viruses.
- Upgrade hardware components if necessary.

3. Blue Screen of Death (BSOD)

- Note down error code displayed.
- Check recently installed software or hardware.
- Update drivers.
- Run memory and disk checks.

4. Internet Connection Issues

- Restart router and modem.
- Check network cables.
- Reset network settings.
- Contact internet service provider if problem persists.

5. Overheating

- Ensure proper ventilation.
- Clean dust from fans and vents.
- Use cooling pads.
- Monitor internal temperatures.

Troubleshooting Common Computer Issues
